Management report

From lead to first delivery

A lead conversion analysis

How many leads become customers, where the rest are lost, and what to do about it.

Gunjan Mishra

October 2026

Four things to know

3,238 leads became 260 customers. Closing the brand gap and clearing the approval backlog could add up to 170 more.

8 of 100

leads become a customer with a first delivery. Each step along the way loses about half.

16 customers

came from 832 leads in the September and October 2024 campaign. The usual rate would have brought about 84.

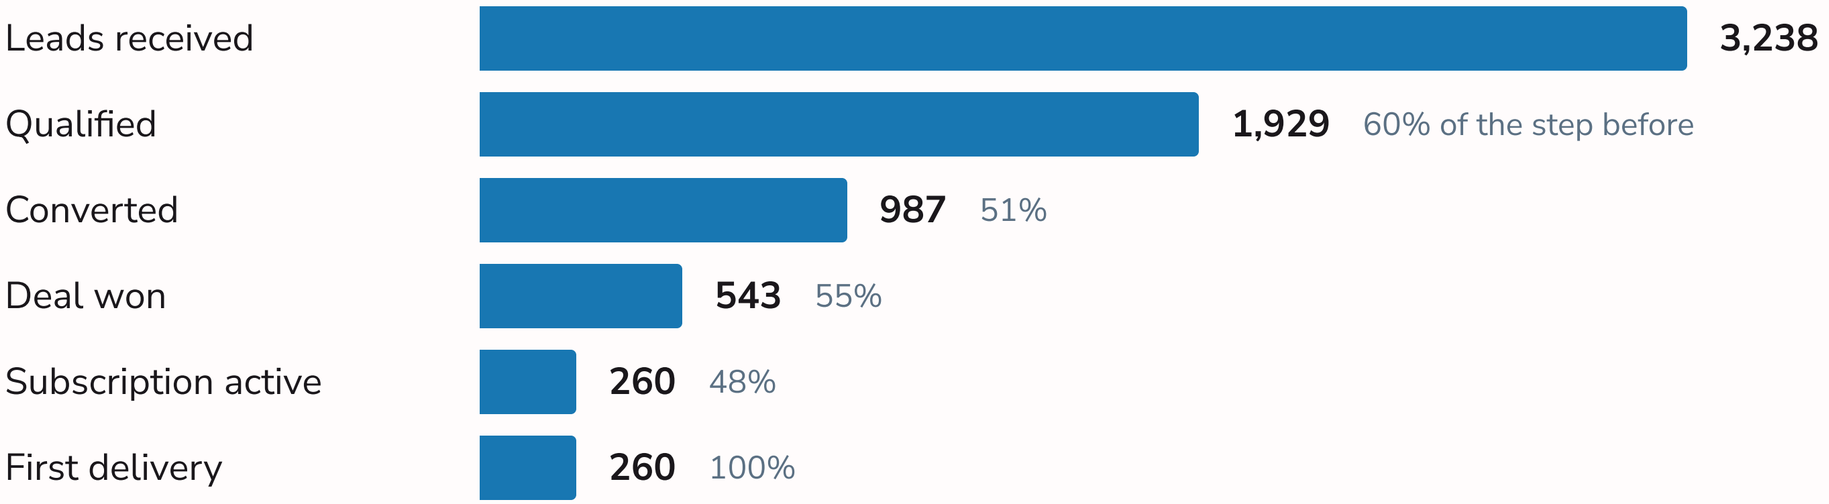

Twice as often

Prosenio turns a lead into a customer, compared with Sanubi and PflegeBox.

49 won deals

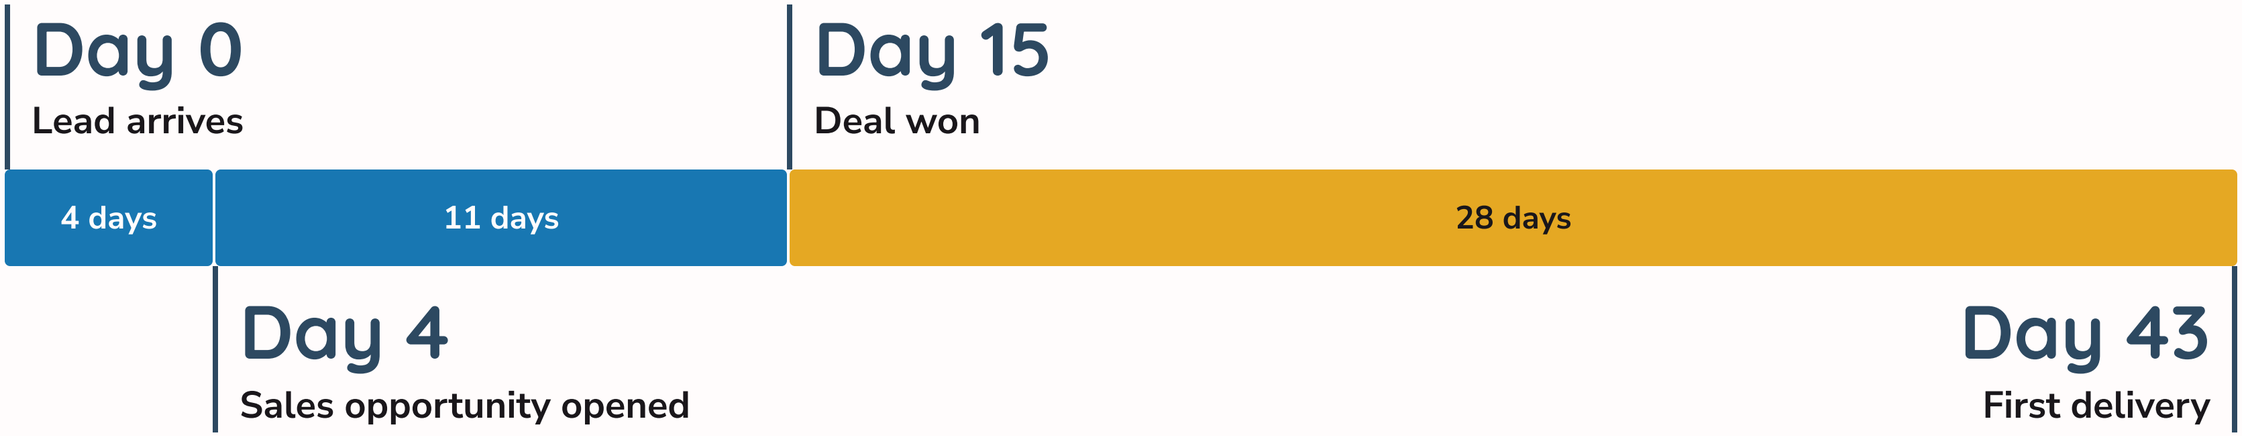

from June and July 2024 are still waiting for approval, and have no active subscription.

8 of every 100 leads become a customer with a first delivery

Every step up to an active subscription loses about half. Once a subscription is active, the delivery always follows.

A new customer gets the first delivery about six weeks after the inquiry

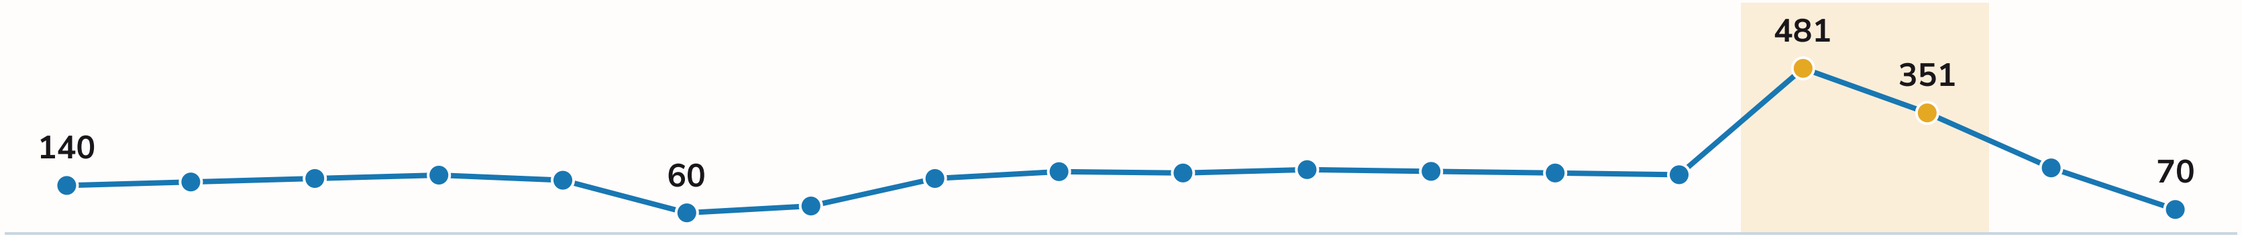

Two thirds of the wait, about four weeks, comes after the deal is won. The timing is the same for every brand.

Typical (median) days for the 260 leads that became customers. Nine in ten had their first delivery within 50 days; the longest took 83.

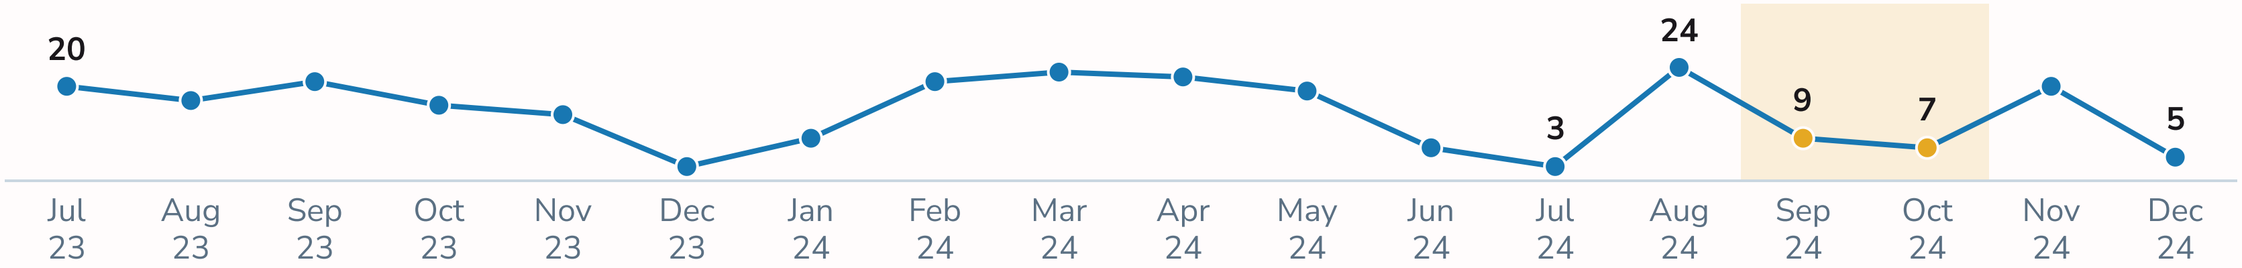

The autumn 2024 campaign tripled leads but brought few customers

September and October 2024, the paid campaign

Leads received per month

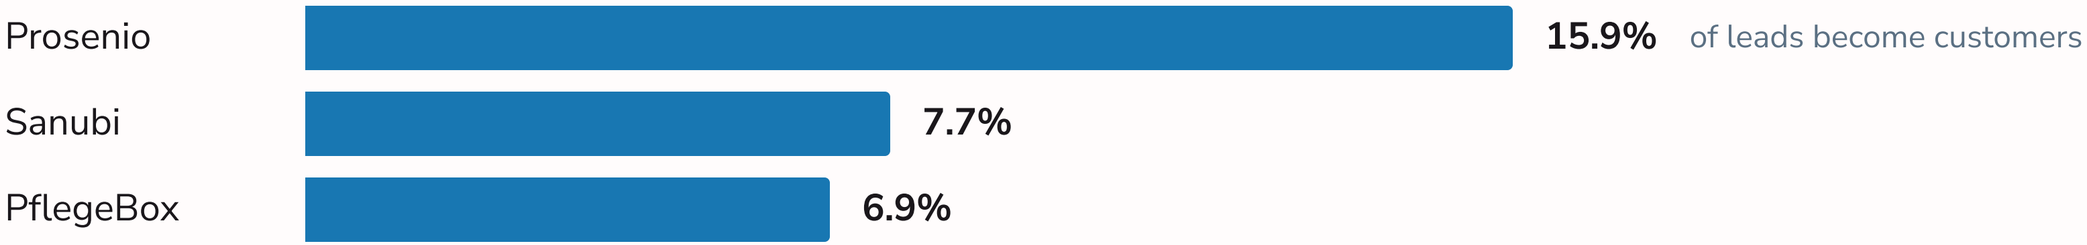

Customers won from those leads

42% of the campaign leads still have the status New, against 10% in other months. Many were never followed up.

Prosenio turns leads into customers twice as often as the other brands

Share that pass each step	Prosenio	Sanubi	PflegeBox
Leads that are qualified	70%	70%	70%
Qualified leads that are converted	70%	48%	49%
Converted leads where the deal is won	64%	47%	50%
Won deals with an active subscription	50%	49%	40%

The campaign months (September and October 2024) are excluded so that they do not distort the comparison. SanBox, a fourth brand, received leads only during the campaign and is not shown.

One in four won deals is sold but not yet delivering

260

Active subscription (48%)

Every one of these has received a delivery.

141

Not yet active (26%)

51 waiting for approval, 47 in draft, 43 on hold.

142

Ended (26%)

96 cancelled, 43 completed, 3 with no subscription.

The 141 deals that are not yet active are sold but not yet delivering. They are the shortest route to more customers.

Why the 139 cancelled or completed subscriptions ended

43
patient died or no longer needs care

15
switched to another provider

10
PflegeBox product discontinued

71
no reason recorded

Won deals from June and July 2024 are stuck waiting for approval

Won deals still waiting for approval, by when the lead arrived

In a normal month no won deal is left waiting for approval.

49 of 77

deals won from June and July 2024 leads are still waiting for approval.

Only 10 of the 77 are active. At the usual rate it would be about 41.

About 30 customers are sold but not yet delivering.

Clearing the backlog and closing the brand gap could add up to 170 customers

That is up to two thirds more customers from the same leads, without spending more on advertising.

The 140 is an upper limit. All three brands get equally good leads (70% are qualified in each), but whether they sell to the same kind of customer needs checking with sales.

In euros: multiply by the yearly revenue per customer. The data has no prices.

Four questions the data cannot answer yet

What is this worth in euros?

The data shows

No prices and no campaign costs.

Ask Finance

Revenue per customer per year, and what the campaign cost.

Why did the campaign bring so few customers?

The data shows

Leads were weaker (29% qualified, against 70%) and 42% were never worked.

Ask Sales

How many people were available in September and October?

Why does Prosenio convert twice as often?

The data shows

Lead quality and timing are the same in every brand.

Ask Sales leads

How is a qualified lead handled? Do products or prices differ?

What stopped approvals in summer 2024?

The data shows

49 won deals from June and July are waiting, against 2 from all other months.

Ask Operations

What changed in the approval process that summer, and who owns it?

Recommended actions, quickest win first

1. Clear the June and July approval backlog	**Operations:** work through the 49 waiting deals this month. About 30 more customers, already sold.
2. Bring Sanubi and PflegeBox up to Prosenio's sales rate	**Sales leads:** compare the three brands' process step by step, starting with how qualified leads are converted. Up to 140 more customers.
3. Follow every won deal until its subscription is active	**Operations:** review all 141 pending deals every week. **Product:** decide what replaces PflegeBox's discontinued products.
4. Judge campaigns by customers, not leads	**Marketing:** set a customer target and check follow-up capacity before the next campaign. Last time 832 leads brought 16 customers.

The teams named are my suggestions for who could take the first step.

Appendix: questions about the data

What counts as a customer?	A lead with a won deal, an active subscription and at least one delivery.
Have recent months had enough time?	Yes. Deliveries are recorded up to July 2025, and a first delivery follows within 12 weeks of the lead.
Can these numbers still change?	Yes. Statuses are as of today, so a subscription shown as cancelled may have been active earlier.
What did the campaign cost per customer?	Unknown. Campaign costs and prices are not in the data.
Why 3,238 leads and not more?	30 records were left out as deleted, duplicated or wrongly dated. 13 leads with steps out of order count only up to their last consistent step.
